KITCHEN floors advice! – Please note an extra coat of finish should be applied to give extra protection from grease and fats. The customer must purchase a spray mop with the correct cleaning products we recommend. This will affect the Original Timber guarantee.

Additional points

- Never over wash the surface finish.
- Sweep and vacuum regularly instead.
- Remember to *not let your customers clean their new floors for a least the first 2-3 weeks*. This applies to the following finishes: Matt waxoil, Wax sheen oil, Wax gloss, Satin waxoil & Natural matt waxoil.
- Eco oil, Lacquered and UV oiled finishes can be washed once installed.
- Do not use an oil maintenance product over hardwax oil; it could make the wax go patchy.
- Please note if you want to re-coat a white waxoil finish with a clear top coat, try a small area first to make sure the colour does not strip off . Alternatively use another coat of the original white waxoil.
- Our “Wax sheen oil” has a higher content of wax and like a wax floor a little more maintenance is required to maintain the sheen.
